CAREER HISTORY

Current Employer : Research and Markets, Dublin, Ireland

Position : .NET Developer

Period of Service : May 2015 to present

Assignments

Employed as .NET Developer at Research and Markets, an e-commerce company known as the world's largest market research store.

I'm mainly involved in the development and maintenance of the back office system, but I also designed and developed the data warehouse and data mining systems.

The main tasks covered are the following:

- Define quarterly priorities with business owner
- Organize tasks in sprints
- Design, Develop and Test the software
- Prioritize triage tickets
- Retrospective and IT meetings

Employer : Orbis Information System - MES, Dublin, Ireland

Position Held : .NET Developer

Period of Service : April 2013 – May 2015

Assignments

Employed as .NET software developer at Orbis MES, a company focus on software of MES Solutions in the Food and Beverage industries.

I've been working in development and designing of software for some of the global leading companies in the food and beverage industry such as Diageo and Glanbia.

The main tasks covered are the following:

- Define the FDS(First Design Specification) with client
- Create mock-up templates of the software
- Organize tasks in sprints
- Weekly meetings with client
- Define the SLA(Service Level Agreement) with client
- Maintain and extend the software

Employer : Keywords International Ltd., Dublin, Ireland

Position Held : QA Tester

Period of Service : July 2012 to March 2013

Assignments

During this experience I had the chance to learn the most common techniques to test a software, such as organize test case, fill up the check-list, log bugs into the db, make sure bugs have been fixed, regressing the current open bugs and in case were repro send back to the developers re-opening the ticket.

Most of the daily tasks to cover were the following:

- Identify, isolate, and document bugs clearly and concisely in a bug database
- Run test suites, verify fixes, spot grammar and language mistakes
- Verify that bugs have been fixed and implemented correctly
- Ensure that correct terminology is used
